Yale School of Public Health is accepting applications for a pre-doctoral fellowship from applicants who seek a PhD degree in Public Health with an interdisciplinary focus on climate change and health. The successful applicant will receive a stipend, health insurance and full tuition. Matriculation will be in September.

The fellowship will be awarded to a qualified student admitted to the PhD Program of the Yale University Graduate School of Arts and Sciences (http://www.yale.edu/graduateschool/admissions). Please choose the Public Health Department. The deadline for applications is December 15. Applications from minority students are particularly encouraged, and applications from international students are welcomed.

This fellowship provide the opportunity to address what many consider to be the greatest public health challenge in this century. The 2015 Lancet Commission on Health and Climate Change concluded that: 1) the effects of climate change are being felt today, and future projections represent an unacceptably high and potentially catastrophic risk to human health; 2) tackling climate change could be the greatest global health opportunity of the 21st century; and 3) the health community has a vital part to play in accelerating progress to address climate change.
